EL DORADO

Ravensburger

For 2 to 4 brave expedition leaders. Ages 10+

Game Design: Reiner Knizia **Editing:** André Maack, Daniel Greiner **Illustration:** Franz Vohwinkel

DESCRIPTION

Deep in the dense jungles of South America lies El Dorado, the city of gold. Unlimited treasure waits in this lost kingdom – gold, jewels, and precious artifacts. You are a group of daring adventurers who embark on a search for the lost city. Slip into the role of brave expedition leaders and guide your team to El Dorado. Assemble a team of experts for your expedition, acquire valuable equipment, and plan your journey wisely. Whoever crosses the border into the golden city first wins the game and claims all the treasure.

Before reading these instructions, please follow the **assembly guide** and set up the game as described.

HOW THE GAME WORKS

Each player starts with a face-down deck of cards— his or her expedition –to draw from. At the beginning of the game, your deck contains the following 8 cards: 1 Sailor, 3 Explorers, and 4 Travelers. You start each turn with **4 cards** in your hand. Use expedition cards to move through the jungle or hire more people for your expedition.

Expedition Card

TURN STRUCTURE

Each player's turn consists of 3 phases:

1 – Play cards

Play cards to **move** your expedition or to **buy** a new card.

2 – Discard played cards

Put all **played cards** on your discard pile.

3 – Draw cards

Draw cards until you have **4 cards** in hand.

The player with the starting player hat token starts the race and completes all 3 phases. Then the next player in turn order does the same. Your goal is El Dorado!

Phase 1 - Play cards

Play any number of cards from your hand to (A) move your playing piece **and/or** (B) buy up to 1 new card for your expedition.

Each card in your hand can only be used once per turn. First, play cards that you want to use for moving. Use the rest of your cards to buy up to 1 new card.

A - Movement

The path to El Dorado leads through different types of terrain: landscape (green, yellow, blue), rubble (gray), and base camp (red).

Each hex space shows the requirements you have to meet to move onto it. The more symbols depicted on the space, the more difficult it is to move there. The number of symbols equals the space's power.

Landscape spaces

Play **one** card from your hand and place it above your expedition board. Most cards have a power value. The power value allows you to move 1 or more spaces of the same type adjacent to the position of your playing piece. Then, you may play another card to make an additional move.

Any played card must meet **2 requirements**:

1. The symbol on the card must match the color/symbol on the space that you want to move to.
2. The power value of the card must be equal or higher than the power of the space.

If both conditions are met, you can move onto that space.

If you have "leftover" power, you may use it to continue moving to the next space. The same 2 requirements apply, but you first subtract the power you already spent from the played card's power value.

You can stop moving at any time. In that case, you lose any unspent power immediately.

Important: You **cannot combine** multiple cards to move onto a landscape space with high power value!

Special spaces

To move onto a **rubble** or **base camp** space, use any cards from your hand. The number of symbols on the space indicates the number of cards you need to play. The identity of those cards is irrelevant.

Cards you play to move onto a **base camp** space aren't discarded. Instead, they are completely removed from the game. They **won't be used again** this game.

Hint: This is a great way to get rid of weak cards from your deck and keep your expedition "lean". This makes it possible for you to keep drawing your best cards with the highest power level.

Important:

You can never move onto mountains (black) or spaces that are already occupied by other playing pieces.

Example: Sarah plays an Explorer and moves 1 green space.

Then she plays a Scout and moves 2 spaces.

Finally, she plays a Trailblazer and moves onto the 3-power space.

B – Buy new cards

You can buy up to 1 card per turn, whether you have moved this turn or not.

Cards with a coin symbol are worth their power. **All other cards** are worth $\frac{1}{2}$ a coin each. Play any number of cards and add their values together. This is the total amount of money you can spend on the new card.

Choose a card on the market board that you can afford and put it face up on your **discard pile**. You may **neither use that card during this turn, nor put it directly in your hand**. The card will eventually be shuffled into your draw pile with the rest of the discard pile.

Example: John decides not to move this turn. Instead, he plans a big purchase. First, he plays all the cards from his hand: 1 Traveler, 1 Photographer, 1 Explorer, and 1 Sailor. Then he adds up their coin values:

1 coin

+

2 coins

+

$\frac{1}{2}$ a coin

+

$\frac{1}{2}$ a coin = 4 coins

Purchase price: 4 coins

John can now afford **any** card from the market board that costs 4 or less coins. He chooses the Telegraph (purchase price 4 coins) and puts it in on his discard pile.

How can I buy the rest of the expedition cards?

At the beginning of the game, you may choose from any of the 6 different expedition card piles on the market board. Once all 3 cards of a pile have been sold, you gain access to the cards next to the market board.

If there is at least one vacant spot on the market board, you may choose any expedition card that you can afford, even if they aren't on the market board. If the chosen card is from one of the piles next to the market board, place its pile on the vacant spot. Each time there is a vacant spot on the market board, you have access to all remaining expedition cards.

Special cards: Items

These cards are marked by a crossed-out card symbol . Item cards can only be played **once** per game. After an item card is used, remove it from the game (put back into the box). Do **not** place it on your discard pile!

Exception: If you play an item card without using its function (e.g. to pass a rubble space, or to spend it as $\frac{1}{2}$ a coin), place it above the expedition board after you played it, then put it on your discard pile.

You can find an overview over all expedition cards in the **glossary** on page 8.

Phase 2 – Discard played cards

At the end of your turn, put **all cards you placed above your expedition board** during phase 1 (**i.e. all the cards you played excluding any cards that were completely removed from the game**) **face up** on your discard pile.

If you still have cards in your hand (experts or items), you can now choose to keep them in your hand for your next turn, or discard them as well. You may decide for each card individually.

Phase 3 – Draw cards

Finally, draw cards from your draw pile until you have 4 cards in your hand.

Your draw pile is empty? If your draw pile doesn't contain enough cards to draw for your next turn, draw as many as possible. Then, shuffle your discard pile to form your new draw pile, then draw the rest of the cards you need.

Pass the turn to the next player in turn order.

Blockades

Blockades are obstacles on your path. The first player who wants to pass a blockade must overcome it by fulfilling its power requirement (number of symbols on the blockade). To do that, he or she plays cards just like he or she would for movement. That player gets to keep the blockade. Use them as tie breakers at the end of the game. After a blockade has been removed, all players may now freely enter the previously blocked spaces.

Blockades work exactly like other spaces. *For example, you can use a Discoverer (machete 3) to meet the machete 1 requirement, then continue moving onto an adjacent green field (if there is one).*

END OF THE GAME

When a player reaches one of the 3 finishing spaces, this triggers the final round (they will then place their playing piece on El Dorado to free up the finishing space). Each player left in that round will now play their final turn. Once the round is completed, the game is over.

If the last player of a round reaches one of the finishing spaces first, the game immediately ends.

What happens if the game is tied?

If the final round ends up with multiple players reaching El Dorado, the player who has collected the most blockades wins the game. If there is still a tie, the player with the highest power blockade wins.

RULES FOR 2 PLAYERS

Assemble the game as usual. The rules for movement, market, and discarding are unchanged. Each player gets a second playing piece in their color. The starting player places their playing pieces on starting spaces #1 and #3, the other player on #2 and #4. To win, you must reach El Dorado first with **both** of your pieces. If both players manage to reach El Dorado with their second playing piece during the final turn, use the normal tie-breaker rules.

When moving on your turn, for each card you play, choose which playing piece that card applies to. Move that playing piece, then choose again for your next card.

You **cannot** use a card for both of your playing pieces by splitting up its power. Additionally, all playing pieces still function as barriers – you **can't** move onto a space that is already occupied by another playing piece – even if it is yours.

EXAMPLE OF A COMPLETE TURN

Anne has these 4 cards in her hand:

Phase 1 – Play cards

- First, Anne plays the Cartographer and draws 2 additional cards from her draw pile.

+

a) Next, Anne starts **moving**. She plays the Pioneer and moves 3 spaces (machete 1 + machete 2 + machete 2).

b) Then, she moves onto the adjacent base camp.

To do that, she must remove one card from her hand. She chooses the Traveler and removes it from the game.

c) To continue moving, Anne plays the Prop Plane as “paddle”.

She uses it to move across the 2 adjacent river spaces (paddle 2 + paddle 1).

Since she can't use the remaining 1 power of her Prop Plane, it goes unspent. She must remove the Prop Plane from the game, and returns it to the box.

d) Next, she plays the Native and moves her piece onto the rubble space. The Native allows her to ignore a space's requirements, which means she doesn't have to play 3 cards from her hand.

- Anne uses her final card to **buy** a new card. She plays the Journalist to gain 3 coins.
- Since there is a vacant spot on the market board, she can purchase any expedition card she likes. She chooses the Compass (2 coins) and puts it on her discard pile. Since it is only possible to buy 1 card per turn, her final coin goes unspent.
- Finally, she puts the remaining cards from the Compass pile on the vacant spot on the market board.

Phase 2 and Phase 3

Anne puts all cards that she played this turn and placed above her expedition board on her discard pile and draws 4 cards from her draw pile.

CAVES VARIANT

Once you have proven your exploration prowess by playing a few games, try the caves variant. Your goal is still to be the first expedition to reach El Dorado, but additionally you have the option to explore caves on the way. Within those **caves** you find tokens that give you an additional advantage.

During setup, shuffle all 36 cave tokens. Create **face-down** piles of 4 tokens each, and place one pile on every mountain space that shows a cave.

If your playing piece comes to a stop **next to** a cave, explore it. (Your piece must stop there, you can't explore while passing a cave.) To explore the cave, take the top cave token from the pile and put it **face up** in front of you. You can own as many cave tokens as you like and play them during your turn.

Note: To explore the same cave again, you first need to move away from the cave, stopping on a space that is not adjacent to the cave. Then you can move your piece to a space next to the cave again. You can't move "alongside" a cave to get multiple tokens!

Once you have collected a cave token, you can play it any time during your current turn, or during any of your later turns. Played cave tiles are **removed from the game**. Return them to the box after use.

Example: Julian plays a Scientist and moves his piece onto the jungle space next to the cave. He takes the top cave token and places it face up in front of him. Julian immediately uses the cave token to move to the next space. That space is also next to the cave, but since he moved from one adjacent space to the next, he won't get another cave token. Optionally, Julian could have saved his cave token for a later movement or to purchase a card.

The game contains the following cave tokens:

Play machete, coin, or paddle tokens to move onto same-colored spaces.

Alternatively, you can use coin tokens to buy a card.

4x

These tokens allow you to draw an additional card from your draw pile. Just like the Cartographer, this token allows you to play that card in the same turn you drew it.

4x

Play these tokens to remove any card in your hand from the game.

3x

These tokens allow you to replace the cards in your hand. When you play the token, play up to 4 cards from your hand above your expedition board, then draw that many cards from your draw pile.

2x

Play this token immediately after using an item card. Instead of removing that item from the game, put it on your discard pile during phase 2 or your turn.

2x

After playing this token, you are allowed to move onto or past an occupied space for the rest of your turn. Mountains are still off-limits.

2x

This token works just like the Native. Use this token to move onto any adjacent space, ignoring its requirements. You can't use this token to move onto an occupied space or a mountain.

2x

Play this token to change the symbol of the next card you play. For example, you can use a Trailblazer (machete 3) as a coin 3 or paddle 3.

GLOSSARY

Expedition cards

Green cards help you clear a path through the jungle.

Blue cards give you paddles to move across rivers.

Yellow cards give you coins to travel through villages or hire new team members.

White jokers allow you to choose **one of the three symbols** whenever you play them: machete, paddle, or coin.

Action cards

Purple action cards can be played at any time during your turn, either while moving or while buying. Follow the card's instructions and then continue playing. Don't forget to remove cards with the symbol from the game after using them!

When you play the *Transmitter* you may take any expedition card without paying for it. Choose any card on the market board or next to it. Put the new card on your discard pile, as usual. Remember to remove the Transmitter from the game after using it.

The *Cartographer* allows you to draw 2 cards from your draw pile and play them this turn. If your draw pile is empty, first shuffle your discard pile as usual, then draw.

The *Compass* allows you to draw 3 cards, but you must remove it from the game after use.

Use the *Scientist* to optimize your expedition. She allows you to immediately draw an additional card and then, if you want to, you may remove any card in your hand from the game.

The *Travel Log* lets you draw 2 cards and then remove up to 2 cards in your hand from the game. Unfortunately, the Travel Log then removes itself from the game.

The *Native* knows the lay of the land and always lets you move one space when played. Ignore that space's requirements and just place your piece on it. The Native can also tear down blockades, but you can't use it to move to an occupied space or onto a mountain space.
